Some Notation

A marriage problem M consists of three sets B, G and R.

- B is the set of boys,
- G is the set of girls, and
- R is the relation between the boys and girls.

 $R \subset B imes G$ where $(b,g) \in R$ means "b knows g".

Some Notation

A marriage problem M consists of three sets B, G and R.

- B is the set of boys,
- G is the set of girls, and
- R is the relation between the boys and girls.

 $R \subset B \times G$ where $(b,g) \in R$ means "b knows g".

G(b) is convenient shorthand for the set of girls b knows, *i.e.*

$$G(b) = \{g \in G \mid (b,g) \in R\}.$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

G(b) is not a function.

Some Notation

A marriage problem M consists of three sets B, G and R.

- B is the set of boys,
- G is the set of girls, and
- R is the relation between the boys and girls.

 $R \subset B \times G$ where $(b,g) \in R$ means "b knows g".

G(b) is convenient shorthand for the set of girls b knows, *i.e.*

$$G(b) = \{g \in G \mid (b,g) \in R\}.$$

G(b) is not a function.

 $G_M(b)$ denotes the set of girls *b* knows relative to the relation in *M*.

Some More Notation

A solution to M = (B, G, R) is an injection

 $f: B \rightarrow G$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

such that $(b, f(b)) \in R$ for every $b \in B$.

Some More Notation

A solution to M = (B, G, R) is an injection

 $f: B \rightarrow G$

such that $(b, f(b)) \in R$ for every $b \in B$.

M is a:

finite marriage problem if |B| is finite.

infinite marriage problem if |B| is not finite.

bounded marriage problem if there is a function $h : B \to G$ so that for each $b \in B$, $G(b) \subseteq \{0, 1, \dots, h(b)\}$.

<ロ>

Theorem If M = (B, G, R) is a finite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

Due to Philip Hall.

Theorem If M = (B, G, R) is a finite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

Due to Philip Hall.

Theorem If M = (B, G, R) is an infinite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

Due to Marshall Hall, Jr.

Theorem If M = (B, G, R) is a finite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

Due to Philip Hall.

Theorem If M = (B, G, R) is an infinite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

Due to Marshall Hall, Jr. (No relation.)

What are the necessary and sufficient conditions for a marriage problem to have a *unique* solution?

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

What are the necessary and sufficient conditions for a marriage problem to have a *unique* solution?

In the finite case, we found the following necessary and sufficient condition.

Theorem

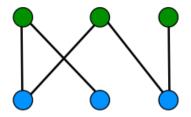

(RCA₀) If M = (B, G, R) is a finite marriage problem with n boys and a unique solution f, then there is an enumeration of the boys $\langle b_i \rangle_{i \leq n}$ such that for every $1 \leq m \leq n$, $|G(\{b_1, b_2, \ldots, b_m\})| = m$.

What are the necessary and sufficient conditions for a marriage problem to have a *unique* solution?

In the finite case, we found the following necessary and sufficient condition.

Theorem

(RCA₀) If M = (B, G, R) is a finite marriage problem with n boys and a unique solution f, then there is an enumeration of the boys $\langle b_i \rangle_{i \leq n}$ such that for every $1 \leq m \leq n$, $|G(\{b_1, b_2, \ldots, b_m\})| = m$.

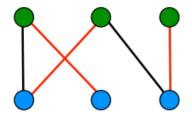

What are the necessary and sufficient conditions for a marriage problem to have a *unique* solution?

In the finite case, we found the following necessary and sufficient condition.

Theorem

(RCA₀) If M = (B, G, R) is a finite marriage problem with n boys and a unique solution f, then there is an enumeration of the boys $\langle b_i \rangle_{i \leq n}$ such that for every $1 \leq m \leq n$, $|G(\{b_1, b_2, \ldots, b_m\})| = m$.

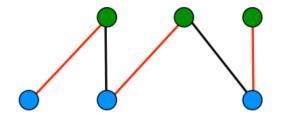

What are the necessary and sufficient conditions for a marriage problem to have a *unique* solution?

In the finite case, we found the following necessary and sufficient condition.

Theorem

If M = (B, G, R) is a finite marriage problem with n boys and a unique solution f, then there is an enumeration of the boys $\langle b_i \rangle_{i \leq n}$ such that for every $1 \leq m \leq n$, $|G(\{b_1, b_2, \ldots, b_m\})| = m$.

Lemma

(RCA₀) If M = (B, G, R) is a finite marriage problem with a unique solution f, then some boy knows exactly one girl.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Proof: Suppose we have M = (B, G, R) as stated above with some initial enumeration of B. Apply the lemma and let b_1 be the first boy such that $|G(b_1)| = 1$.

Proof: Suppose we have M = (B, G, R) as stated above with some initial enumeration of B. Apply the lemma and let b_1 be the first boy such that $|G(b_1)| = 1$.

Define $M_2 = (B - \{b_1\}, G - G(b_1), R_2)$. Because M has a unique solution, M_2 has a unique solution, namely the restriction of f to the sets of M_2 . Apply the lemma once more and let b_2 be the first boy in $B - \{b_1\}$ such that $|G_{M_2}(b_2)| = 1$.

Proof: Suppose we have M = (B, G, R) as stated above with some initial enumeration of *B*. Apply the lemma and let b_1 be the first boy such that $|G(b_1)| = 1$.

Define $M_2 = (B - \{b_1\}, G - G(b_1), R_2)$. Because M has a unique solution, M_2 has a unique solution, namely the restriction of f to the sets of M_2 . Apply the lemma once more and let b_2 be the first boy in $B - \{b_1\}$ such that $|G_{M_2}(b_2)| = 1$.

Continuing this process inductively yields the $j^{\rm th}$ boy in our desired enumeration from

 $M_j = (B - \{b_1, b_2, \dots, b_{j-1}\}, G - G(b_1, b_2, \dots, b_{j-1}), R_j).$

Proof: Suppose we have M = (B, G, R) as stated above with some initial enumeration of B. Apply the lemma and let b_1 be the first boy such that $|G(b_1)| = 1$.

Define $M_2 = (B - \{b_1\}, G - G(b_1), R_2)$. Because M has a unique solution, M_2 has a unique solution, namely the restriction of f to the sets of M_2 . Apply the lemma once more and let b_2 be the first boy in $B - \{b_1\}$ such that $|G_{M_2}(b_2)| = 1$.

Continuing this process inductively yields the $j^{\rm th}$ boy in our desired enumeration from

$$M_j = (B - \{b_1, b_2, \dots, b_{j-1}\}, G - G(b_1, b_2, \dots, b_{j-1}), R_j).$$

After the n^{th} iteration we have (b_1, b_2, \ldots, b_n) where for every $1 \le m \le n$, $|G(\{b_1, b_2, \ldots, b_m\})| = m$.

The statement regarding finite marriage problems with unique solutions can be generalized to the *infinite* case. Paralleling the previous work we have:

Theorem

If M = (B, G, R) is an infinite marriage problem with a unique solution f, then there is an enumeration of the boys $\langle b_i \rangle_{i \ge 1}$ such that for every $n \ge 1$, $|G(\{b_1, b_2, \dots, b_n\})| = n$.

II: Reverse Mathematics

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Reverse Mathematics

Reverse mathematics is the subfield of mathematical logic dedicated to classifying the logical strength of mathematical theorems.

This is done by proving theorems equivalent to a hierarchy of axioms over a weak base axiom system.

 RCA_0 WKL₀ ACA₀ ATR₀ $\Pi_1^1 - CA_0$

 RCA_0 proves the *intermediate value theorem* and the *uncountability of* \mathbb{R} .

RCA₀ does **not** prove the *existence of Riemann integrals*.

Equivalences

Theorem

The following are provable in RCA₀.

- (i) WKL₀ ⇐⇒ For every continuous function f(x) on a closed and bounded interval a ≤ x ≤ b, the Riemann integral ∫_a^b f(x)dx exists and is finite. (Simpson)
- (ii) ACA₀ \iff For all one-to-one functions $f : \mathbb{N} \to \mathbb{N}$ there exists a set $X \subseteq \mathbb{N}$ such that Ran(f) = X. (Simpson)
- (iii) $ATR_0 \iff Any \text{ two well orderings are comparable.}$ (Friedman)

(iv) $\Pi_1^1 - CA_0 \iff The \text{Cantor/Bendixson theorem for } \mathbb{N}^{\mathbb{N}}$: Every closed set in $\mathbb{N}^{\mathbb{N}}$ is the union of a perfect closed set and a countable set. (Simpson)

Jeff Hirst proved the following equivalence results:

Theorem

(RCA₀) If M = (B, G, R) is a finite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Jeff Hirst proved the following equivalence results:

Theorem

(RCA₀) If M = (B, G, R) is a finite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.

Theorem

(RCA₀) The following are equivalent:

- 1 ACA₀
- 2 If M = (B, G, R) is an infinite marriage problem such that $|G(B_0)| \ge |B_0|$ for every $B_0 \subset B$, then M has a solution.
